INDIVIDUALLY BOXED FLAGS (OPTIONAL)

No additional charge for all 2' x 3' and larger Nylon and Poly-Max™ flags throughout this catalog. The following are not eligible for our boxing program: E-Poly Flags, Message Flags, Attention Flags & Banners, Custom Flags & Banners, Fans, Pulldowns, Decorations and Closeouts. You must specify at time of order if you want your flags boxed. 8' x 12' and larger flags are supplied in plain white boxes.

See page 5 for more sewing specifications. We sew our Poly-Max™ U.S. Flags exactly the same as our Endura-Nylon™ U.S. Flags.
All U.S. outdoor flags on pages 2 through 6 can be combined to achieve the higher quantity pricing.

HEADER FEATURES

HEADERS: All headers are made with a heavy-duty, bright white cotton polyester blend army duck cloth.

GROMMETS: All grommets are solid brass. Grommets are spaced evenly throughout the length of the header. #1 flat rimmed grommets are used for 12" x 18" flags. #2 rolled rimmed grommets with a tooth washer are used for all 16" x 24" and larger flags. 8' x 12' and larger include a heavy-duty plastic reinforcement sleeve at each grommet location.

ROPE THIMBLE: #10 white nylon rope is sewn into the header. Galvanized thimbles are attached using a triple crimped rope sleeve. The entire length of the rope is sewn into the header to stabilize its position preventing "bunching" of the header.

CORNER PATCHES: 2-ply corner patches are sewn into each header corner.

FLAG CARE

Our flags are manufactured using the highest quality U.S. made materials available. They give exceptional service in exchange for reasonable care. Wind, water, sun, dirt and neglect are the major enemies of a flag. No one can control the weather but you can take some important steps to lengthen the life of your flag:

- Periodically, gently wash your flag in cool water with mild detergent. Line or flat dry thoroughly to prevent mildew. If wrinkled, use the appropriate heat setting on your iron for the flag fabric.
- At the first sign of fraying have your flag repaired before further damage is done. Extremely torn or frayed flags should be disposed of properly following the U.S. Flag Code.
- Always keep your flagpole as clean as possible. Move your pole if your flag does not have adequate room to fly unobstructed.
- To extend the life of your flag we recommend having two flags and rotating them throughout the year.

All U.S. outdoor flags on pages 2 through 6 can be combined to achieve the higher quantity pricing.

Where indicated below, our ornaments can be used with a ferrule or spindle. A ferrule is used for indoor use on wood poles and a spindle is used for outdoor use on in-ground or wall mounted flagpoles. When using an ornament for an indoor aluminum pole with a top adapter already installed, a ferrule or spindle is not required. The exception to the above is the Elks Head ornament, which is supplied with a threaded rod attached to the bottom of the ornament. A special ferrule is supplied for use with our wood indoor poles. Please specify if you require this special ferrule.

EVOLUTION OF OLD GLORY

Shown here are the 27 legal flags flown throughout our history. By law, a star is added to the U.S. Flag on the 4th of July following the admission of a State(s) to the Union. Contrary to popular belief, the first official U.S. Flag was not the Betsy Ross Flag (13 stars in a circle) but the staggered star pattern shown at the left. It is important to note that no U.S. Flag ever becomes obsolete. Each flag shown is still a legal flag and may be flown at anytime.

NYLON FABRIC

Our nylon fabric is of top quality, woven from 200 denier yarns, and has a weight of approximately 3.2 ounces per yard. A perfect choice for use in flag & banner making, these dyed nylons also resist sunlight. Bolt edges are ravel resistant in all colors. The colors below are intended to show the general range of color shades. The actual fabric shades may vary slightly. If you have a question about a particular color, please call or fax and we will send you an actual swatch of the fabric. One yard minimum per color in full yard increments.

DIGITALLY PRINTED CUSTOM FLAGS & BANNERS

We can print any design using our direct print digital printing process. The possibilities are endless. Our heavy duty 100% Tight-Knit polyester, 200-denier nylon and Poly-Dacron materials are ideal for outdoor applications. Our Poly-Satin material is ideal for indoor applications such as wall and podium banners. No limits on colors or type of image. We can even print on 72" wide material. You can have just one flag printed at a very economical price. Flags can be finished with canvas header and grommets, double sided, pole sleeve or any way you want! Contact us today for a prompt quotation.

All Custom Flags and Banners including our Appliqued Nylon Outdoor Flags are made in the U.S.A.

CUSTOM NYLON OUTDOOR FLAGS - APPLIQUED

Custom appliqued flags are individually hand-sewn using 100% Invista Solar-Max™ nylon, the most long-lasting, weather resistant material in its price range. The result is a luxurious dimensional look at a fraction of the cost of embroidered flags. **Please submit artwork for an exact quotation.**

All that is needed is camera ready artwork of the design that you require. We can also create your design with an additional modest art charge from a rough sketch or just by talking with our artist.

We can also custom design and make indoor flags, table banners, lead parade banners or any other flag or banner. Please call our fax for a prompt quotation. A deposit of 40% is required to process your order. Art charges, if required, are billed at $100.00 per hour and are determined on an individual basis.

CUSTOM SUNBRELLA AVENUE BANNERS

Double-Sided Print with Top & Bottom Pole Hems

Sunbrella fabric is a woven acrylic material which is ideally suited for outdoor use. This solution dyed fabric resists fading and the harshest weather conditions. The pricing on this page is for single ply banners printed on both sides. Bleed imprints are not available. Some fabric and ink color combinations may require double ply banners with an opaque liner; please contact us for a prompt quotation.

See page 119 for pricing on custom Avenue Banners.

Ground Set Cone Tapered Aluminum (6063-T6) Flagpoles

GENERAL INFORMATION

Our cone tapered ground set aluminum flagpoles are precision fabricated from new, **6063-T6** tubing utilizing the industry's most sophisticated manufacturing processes. The conical portion tapers approximately 1" in every 5-1/2 feet. Poles with overall lengths of less than 38'6" are shipped in one piece. Longer lengths are shipped in sections and will be factory fitted with a self-aligning sleeve which requires no field welding. Upon proper assembly a hair-line joint will occur. All poles are double spiral wrapped with protective paper and shipped in a hard fiber tube. All foundation dimensions listed in this catalog are intended for general guidelines only in good, firm, dry soil. It is recommended to consult and engineer for specific foundation dimensions suited to your exact location.

STANDARD FINISHES

All flagpole shafts are highly polished with fine grain aluminum oxide cloth resulting in a high quality, deep satin lustre finish. This finish represents the ultimate in architectural finishes for aluminum flagpoles. The elegant, soft sheen remains maintenance free. The following anodized finishes are available as standard colors. *Note: For bronze, dark bronze #313 is supplied unless otherwise specified.*

CUSTOM FINISHES

We also offer alternate finishes & custom paint colors which may suit particular job conditions better. Contact us for a prompt quotation.

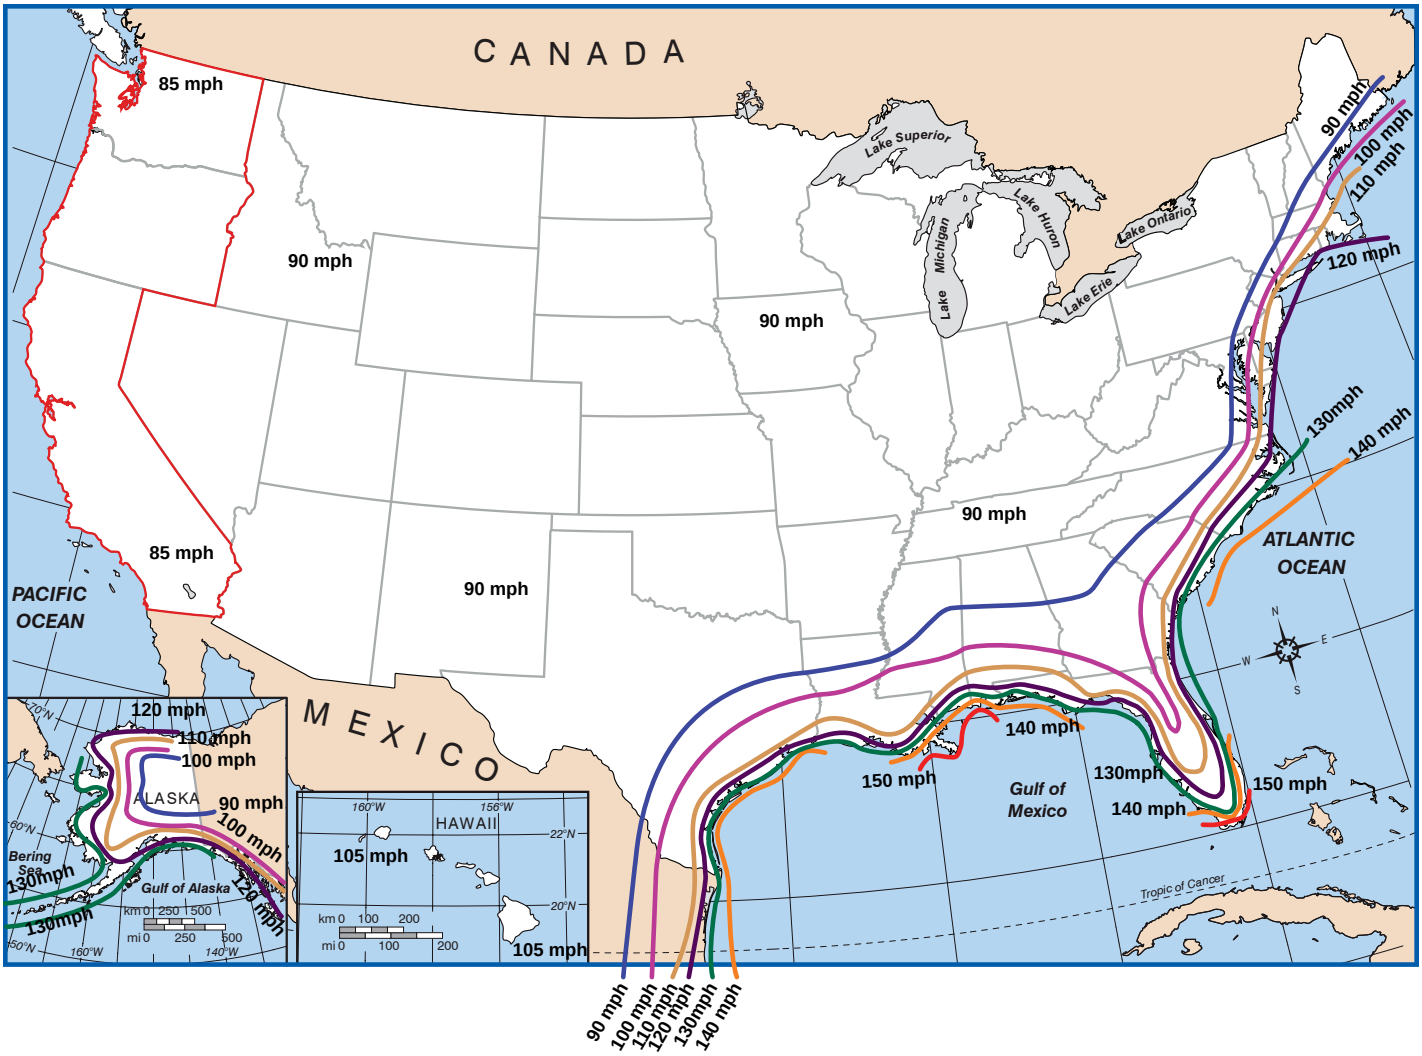
"WARNING" - The flagpole shaft will stain if allowed to remain in contact with wet or damp wrappings. If there is any sign that the shaft or its shipping tube has come in contact with water during shipment, remove it from the tube and unwrap immediately. If the shaft is to be stored outdoors, it must be stored unwrapped, out of the tube, and off the ground. If the shaft is to be stored indoors, it may be left in the wrappings and the tube, provided that it shows no sign of having been exposed to moisture and that it will not be exposed to moisture during storage.

"CAUTION" - Extreme care must be exercised when installing flagpoles near overhead power lines or when digging in the vicinity of buried cable or piping. Contact your local authorities before any digging.

GROUND SET CONE TAPERED ALUMINUM FLAGPOLES

WIND CHART

The map below shows the maximum steady wind expected at an elevation of thirty feet above ground level within a fifty-year period of recurrence. Areas with the same maximum constant or steady wind speed are indicated.



PLEASE NOTE: recommended flag sizes throughout this catalog do not represent a warranty that the flag size shown may be safely flown in all wind speeds. Personal injury, flagpole damage or property damage can occur when flying oversized flags and banners or flying flags in higher winds than recommended.

Because wind speeds are usually not constant, and gusts are involved, flagpoles (both flagged and unflagged) are listed in this catalog with a constant wind speed and a 1.3 gust factor.

Flagpoles and their associated wind speeds listed assume that ten percent of the overall length of the flagpole is buried per or recommendations at or near ground level. Special engineering may be required for other applications such as wall or roof mounted flagpoles. Contact us for a prompt response regarding any situation that may require special engineering.

Design of safe flagpoles requires knowledge of the loads to which they will be subjected. Principal load acting on flagpoles is wind load and that load must be carefully determined. Maximum wind speeds to which flagpoles are exposed depend on geographical location, whether or not it is in the center of a large city, a small town's outskirts, seashore, at ground level or on the roof of a high building. Wind speeds generally are higher along coastal areas than inland. They are also higher in open country than in the center of cities. Wind speed also becomes greater as height above ground increases. Wind exerts a force on the pole as well as the flag, thus both loads must be added to determine total load. Flags of different sizes are designed to be flown from different poles.

It's important that flagpoles be selected which are capable of supporting the largest flag intended to be flown in the highest wind speed to which it will be subjected. Loads on flagpoles are resisted by the mounting foundation, roof, or wall to which it is secured.

COUNTER-BALANCED TILTING FLAGPOLES

All of the cone tapered aluminum flagpoles on pages 139 through 147 can be adapted with a counter-balanced tilt system. For ease of maintenance, the counter-balanced tilting flagpole has no equal. This unique design features a steel counter-weight inside the flagpole shaft to avoid disturbing the appearance of the tapered shaft. The base structure consists of two support channels welded to a base plate. The flagpole shaft is suspended by a pivot bolt and secured with a locking clip assembly. Anchor bolts are furnished for mounting to a concrete base. **Please allow 3 - 4 weeks after approval for shipping.**

TILTING SHOE BASE FLAGPOLES

All of the cone tapered aluminum flagpoles on pages 139 through 153 with a 3", 4", 5" or 6" butt diameter can be supplied with a tilting shoe base. The tilting base is circumferentially welded to the base eliminating the need for a flash collar. The hinged portion of the base is held in place by (3) stainless steel, allen head bolts and pivots on a solid aluminum pivot rod. Anchor bolts are furnished for mounting to a concrete base.

GROUND SET DIMINISHING SECTION STEEL FLAGPOLES

Diminishing Section Steel Flagpoles are fabricated from all new seamless steel tubing. Diminishing sections, welded together, form a tapered appearance. Sizes below are most commonly used. We can also fabricate other sizes to any specifications.

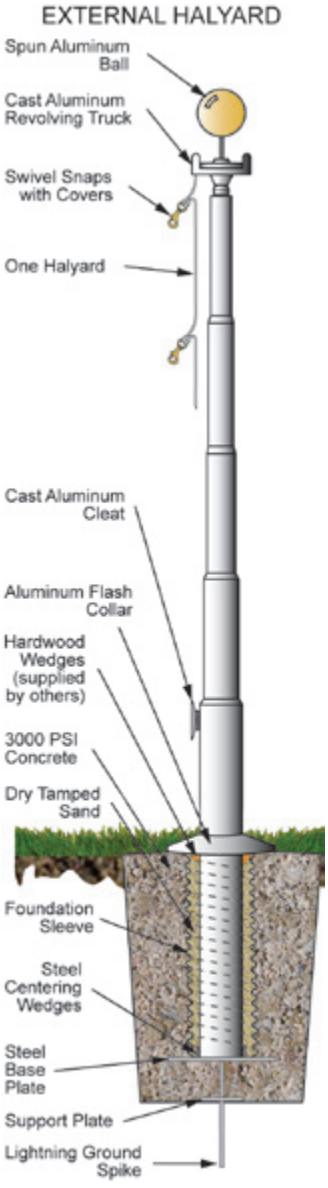
EXTERNAL HALYARD STANDARD ACCESSORIES

- **Ball:** 14 Ga. Aluminum with flash seam. Gold anodized is furnished unless otherwise specified or choose from Clear Anodized (Silver) or finished to match shaft.
- **Truck:** External halyard heavy duty, non-fouling, revolving with stainless steel sealed lubricant ball bearing assemblies.
- **Halyard:** One waterproof, mildew and U.V.-resistant nylon halyard with wire center. Choose: White, Silver, Black or Brown to match shaft.
- **Cleat:** Heavy-duty cast aluminum finished to match shaft. Secured with two stainless steel, flat-head, tamper-proof machine screws.
- **Collar:** Ornamental base or flash collar of spun aluminum with a diameter of at least 1" larger than the foundation sleeve.
- **Foundation Sleeve:** 16 Ga. Corrugated steel tubing with lightning spike, base plate, support plate and centering wedges.

INTERNAL HALYARD STANDARD ACCESSORIES

- **Ball (optional):** 14 Ga. Aluminum with flash seam. Gold anodized is furnished unless otherwise specified or choose from Clear Anodized (Silver) or finished to match shaft.
- **Truck:** Internal halyard heavy duty, revolving with enclosed stainless steel bearings and raceway.
- **Halyard:** One stainless steel aircraft cable with proper size flag arrangement, shock spring, counterweight, beaded retainer ring and flag snaps.
- **Winch:** Mounted inside shaft and operable only by a removable crank handle. Permits rapid raising and lowering of flag with little effort.
- **Collar:** Ornamental base or flash collar of spun aluminum with a diameter of at least 1" larger than the foundation sleeve.
- **Foundation Sleeve:** 16 Ga. Corrugated steel tubing with lightning spike, base plate, support plate and centering wedges.

Recommendation: flagpoles above 100' exposed height should be equipped with an internal halyard to aid in raising and lowering larger flags.



Finish: All of our steel flagpoles are mechanically cleaned and chemically etched to provide a smooth surface. Two coats of two-part polyurethane primer are applied before application of two polyurethane finish coats. Specify custom or one of these standard colors: Aluminum (silver), Light Bronze, Medium Bronze, Dark Bronze, Black or White. Trucks are finished to match flagpole shaft.

FIBERGLASS SERIES

Our fiberglass flagpoles are manufactured to duplicate the classic Greek Entasis taper design. All poles have an ultra-hard, gel coat finish that stands up to the harshest of weather conditions. Our rugged gel coat finish is especially well suited near salt water or in other extreme weather conditions - our poles will not corrode, pit or rust. Since fiberglass is a non-conductor, no grounding is required; thus installation is easy and inexpensive. Our standard flagpoles have a Brilliant White pre-cast gel coat finish. Other colors are available upon request; please contact us for a prompt quotation. **Our innovative molding process produces a flagpole shaft with a tensile strength of 50,000 pounds per square inch.** Inside a steel clam shell mold, seven layers of reinforced fiberglass roving, mixed with a polyester resin is aligned in a vertical plane for maximum strength and placed on a thick layer of gel-coat. An inflatable bladder is laid the entire length of the mold. The mold is closed, the bladder inflated and the resulting pole is created by subtle pressure and slow curing during an exothermic chemical reaction.

"M" - WINCHES

The "M" - Winch is gearless and self locking at any point, eliminating the need for a separate break. This direct drive winch provides for rapid raising & lowering of the flag with little effort. This improved design does not require any welding thus avoiding discoloration when an anodized finish is required. No monthly lubrication is needed and this winch system is easily adaptable to existing on-site flagpoles. The winch is inserted into the pole and secured with a stainless steel bolt on the back side of the pole. Standard colors are Satin, Bronze #313, White & Black. Please specify color when ordering. If not specified Satin will be sent. Other sizes available upon request. The pricing below does not include a winch handle which is sold separately - see "M"-Winch Handle pricing below.

NEW "M" - Winch Model M-6H (see below)

Normal appearance of "M"-Winch while flag is flying or there is no flag being flown.

To remove lock, insert key, turn counter-clockwise and remove the lock exposing the winch insertion slot.

Insert handle into the winch insertion slot, apply inward pressure to locking mechanism, and raise or lower the flag to desired position.

STAINLESS STEEL WINCHES

These winches are available for use on flagpoles with a butt diameter of 6" or larger. These gearless winches utilize cast bronze internal brakes which release when a winch handle is inserted and rotational pressure is applied. The winch is locked at any position by removing the handle which engages the brake system. The small size is generally used on flagpoles up to 45', the large size is used on flagpoles from 50' thru 80' and the X-Large size is used on flagpoles higher than 80'. The winch is mounted to the inside of the flagpole with two 5/16"-18NC stainless steel bolts with mounting centers being 3-1/2". Recommended diameters of stainless steel cable are 1/8" or 5/32".

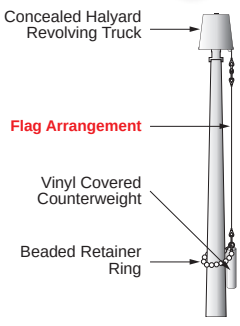
STANDARD FLAG ARRANGEMENTS



Constructed of 1/8" stainless steel aircraft cable with a stainless steel thimble attached at each end with 2 copper crimps. These flag arrangements provide the method of attaching the flag or flags to the cable assembly. This is also an excellent method for changing the quantity of flags or the size(s) of flag(s) without having to change the entire cable assembly. Standard arrangements are supplied with either 2 or 3 stainless steel quick links depending on the recommended flag size. Deluxe arrangements are supplied with a more complete set of accessories.

CABLE ASSEMBLIES

Constructed of 1/8" and/or 3/16" stainless steel aircraft cable incorporating a stainless steel swivel to minimize the effect of unraveling due to the rotation of the truck assembly. The lower cable section has a copper cable stop attached to one end for installation into a stainless steel winch. This cable stop can easily be removed if the winch is an “M"-type which does not require a cable stop. The upper cable section is supplied with a stainless steel thimble, 2 copper crimps, and two ball cable stops, however, because this section must be threaded through the truck assembly, these parts are not attached to the cable before shipment and must be attached in the field. These standard cable assemblies are designed for flagpoles with a winch installed at 4' above grade.

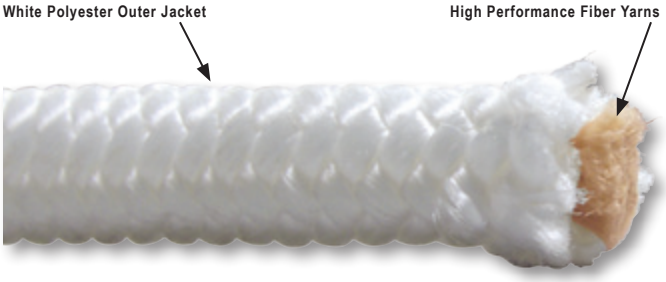
ROPE ASSEMBLIES

These assemblies are typically used in rope style internal halyard flagpoles where a cam cleat has been installed. Comes complete with a zinc plated carbon steel rope thimble attached to one end of the rope and stainless steel quick link.



TECHNORA© ROPE ASSEMBLIES

High performance - high tech fibers are encased inside a polyester fiber yarn jacket resulting in a high strength, low stretch, U.V. and abrasion resistant flagpole halyard.

ROPE RETAINER RINGS

Retainer rings are generally used with internal halyard flagpoles by providing a means of keeping the bottom of the flag close to the pole and as an aid to raise and lower the flag. Retainer rings can also be used on large multi-grommet flags on both external and internal halyard flagpoles as a means to keep the flags close to the pole and reduce the strain on the upper and lower grommets of the flag. These roped retainer rings are constructed of 3/16" nylon wire center halyard with a zinc plated carbon steel thimble attached to one end with an aluminum crimp. Complete with stainless steel quick link. Standard colors are White, Silver, Bronze #313 and Black. Please specify color when ordering. If not specified White will be supplied.

BEADED RETAINER RINGS

Retainer rings are generally used with internal halyard flagpoles by providing a means of keeping the bottom of the flag close to the pole and as an aid to raise and lower the flag. Retainer rings can also be used on large multi-grommet flags on both external and internal halyard flagpoles as a means to keep the flags close to the pole and reduce the strain on the upper and lower grommets of the flag. These beaded rings are constructed of either 1" or combination of 1" & 2" diameter nylon balls strung onto 1/8" stainless steel aircraft cable with a stainless steel thimble attached to each end with two copper crimps. Complete with stainless steel quick link. Standard stock colors are White, Silver and Bronze #313. Please specify color when ordering. If not specified White will be supplied. The length of each retainer ring was determined by measuring from the outside tip of each thimble (the quick link was not included in the measurement).

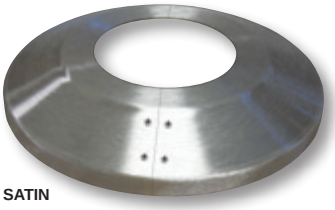
STANDARD PROFILE SPLIT ALUMINUM FLASH COLLARS WITH .060" WALL THICKNESS



SATIN

A split collar can be useful when replacing or adding a collar to an installed flagpole without removing the pole from the foundation sleeve. The collar is split in half and mounting tabs with screws are installed on the under side of the collar. The quantity and size of the mounting tabs may vary depending on the size of the flash collar ordered.

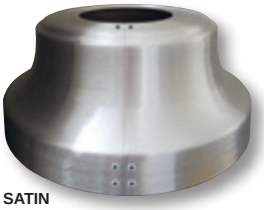
HIGH PROFILE SPLIT 'TRUMPET' ALUMINUM FLASH COLLARS



SATIN

Trumpet collars are generally used with flagpoles where a shoe base is welded to the bottom; however, these collars can be used on standard in-ground mounted flagpoles if a higher profile is desired. A split collar can be useful when replacing or adding a collar to an installed flagpole without removing the pole from the foundation sleeve. The collar is split in half and mounting tabs with screws are installed on the under side of the collar. The quantity and size of the mounting tabs may vary depending on the size of the flash collar ordered. Supplied in a standard wall thickness of .060". The chart below contains the combinations most commonly requested. For other combinations please contact us.

GALVANIZED STEEL FOUNDATION SLEEVES

The most common type of flagpole installation is the in-ground foundation sleeve method which calls for 1' of the flagpole to be encased in the ground sleeve for each 10' of exposed flagpole height. The diameter of the sleeve should be at least 2" greater than the outside diameter of the flagpole with the area between the flagpole and the sleeve filled with dry sand. Sleeves with a 6" diameter are supplied with a base plate and grounding spike. Sleeves with a diameter of greater than 6" are supplied with a base plate, support plate, grounding spike and, for ease of vertical alignment, steel centering wedges welded to the inside of the base plate. If you require other sizes than listed or have special on-site conditions please consult the factory.

WHEN TO DISPLAY THE FLAG

The flag should be displayed on all days when weather permits, especially on legal holidays or other special occasions. It is customary to display the flag from sunrise to sunset on buildings or on stationary flagstaffs in the open. However, on special occasions it may be displayed at night, preferably lighted. In several places the flag flies day and night; among these are the Capitol in Washington, D.C., and the Fort Henry National Monument in Baltimore, which was the inspiration for "The Star Spangled Banner" by Francis Scott Key.

The flag should be displayed…

- on or near the main administration building of every public institution
- in or near polling places on election days
- in or near schools when they are in session

A citizen may fly the flag on any day he wishes.

HOW TO FLY THE FLAG

The flag should be raised and lowered by hand. Never, raise the flag while it is furled; unfurl, then hoist quickly to the peak of the flagstaff. It should be lowered slowly and ceremoniously. The flag should never be allowed to touch anything beneath it, such as the ground or the floor.

The flying of the flag at half-staff, is a sign of mourning. When flown at half-staff, the flag should be first hoisted to the peak, then immediately lowered to the half-staff position. It should be raised to the peak again for a moment before it is lowered for the day. "Half-staff" is the point midway between the top and bottom of the flagstaff. On Memorial Day in May, the flag should fly at half-staff from sunrise until noon, and at full-staff from noon until sunset.

At sea services by Navy chaplains, the church pennant may be flown above the flag.

No other flag may be flown above The United States flag except at the United Nations Headquarters. The UN flag may be placed above flags of all member nations. In the UN enclave, national flags of all members are flown with equal prominence.

When the flags of two or more nations are displayed together they should be flown from separate staffs of the same height, and the flags should be of approximately equal size. International usage forbids the display of the flag of one nation above that of another in time of peace.

HOW TO DISPLAY THE FLAG

When carried in procession with another flag or flags, the Stars and Stripes should be at the right-front of the column, or when there is a line of other flags, in front of the center of that line. The flag should never be carried flat or horizontally, but always aloft and floating free.

When a number of flags are grouped and displayed from staffs, the flag of the United States should be in the center or at the highest point of the group. When displayed with another flag from crossed staffs, the flag of the United States should be on the right (the flag's own right), and its staff should be in front of the staff of the other flag.

If the flag is displayed from a staff projected from a window sill, balcony or front of a building, the union of the flag should go to the peak of the staff (unless the flag is to be displayed at half-staff).

When the flag is displayed in any manner other than being flown from a staff, it should be displayed flat, whether indoors or out. If displayed either horizontally or vertically against a wall, the union should be uppermost and to the flag's own right; that is to the observer's left. When displayed in a window it should be suspended in the same way-that is, with the union to the left of the observer in the street.

When displayed over the middle of the street, the Stars and Stripes should be suspended vertical with the union to the north on an east-west street and to the east on a north-south street.

When the flag is suspended over a sidewalk from a rope extending from house to pole at the edge of the sidewalk, the flag should be hoisted out from the building toward the pole union first.

When used on a speaker's platform the flag may be displayed flat, above and behind the speaker. If flown from a staff it should be on the speaker's right; all other flags on the platform should be on his left.

When it is displayed on the pulpit or chancel in a church, the flag should be flown from a staff placed on the clergyman's right as he faces the congregation. All other flags on the pulpit or chancel should be on his left.

However, when the flag is displayed on the floor of a church or auditorium, on a level with the audience, it is placed to the right of the audience.

When flags of states or cities, or pennants of societies, are flown on the same halyard with the flag of the United States, the latter should always be at the peak. When flown from adjacent staffs, the Stars and Stripes should be raised first and lowered last.

When used to cover a casket, the flag should be placed so that the union is at the head and over the left shoulder. The flag should not be lowered into the grave or allowed to touch the ground. The casket should be carried foot-first from the hearse to the grave.

SALUTING THE FLAG

In saluting the flag those present in uniform should render the military salute. When not in uniform, men should remove the hat with the right hand and hold it at the left shoulder, the hand being over the heart. Women, and men without hats, should place the right hand over the heart. Aliens should stand at attention.

All persons present should face the flag, stand at attention and salute on the following occasions:

1. When the flag is passing in a parade or review. The salute to the flag in the moving column is rendered at the moment the flag passes.

2. During the ceremony of hoisting or lowering the flag.

3. When the National Anthem is played and the flag is displayed.

4. During the Pledge of Allegiance…I pledge allegiance to the flag of the United States of America and to the Republic for which it stands, one Nation under God, indivisible, with liberty and justice for all.

When the National Anthem is played and the flag is not displayed, all present should stand and face toward the music. Those in uniform should salute at the first note of the anthem, retaining this position until the last note. All others should stand at attention, men removing their hats. When the flag is displayed, all present should face the flag and salute.

HOW TO DISPOSE OF WORN FLAGS

Every precaution should be taken to prevent the flag from becoming soiled. When a flag is in such a condition, through wear or damage, that is no longer a fitting emblem for display, it should be destroyed privately in a dignified manner.

The flag should NEVER

1. Be tilted (dipped) even momentarily to any person or thing. Regimental colors, State flags, organization or institutional flags may be tilted as the mark of honor.

2. Be displayed with the union down except as a signal of distress.

3. Be carried flat or horizontally, but always aloft and floating free.

4. Be displayed on a float, motor car or boat except from a staff.

5. Be allowed to touch the ground or floor, or brush against objects.

6. Have objects placed on, over it, or be used as a covering for a ceiling.

7. Have any mark, insignia, letter, work, figure, picture or drawing of any nature placed upon or attached to it.

8. Be used as a receptacle for carrying anything, or be used to cover a statue or monument. If used in connection with unveiling ceremonies, it should not serve as a covering of the object being unveiled.

9. Be used for advertising purposes or have advertising signs fastened to its staff or halyard.

10. Be embroidered on such articles as handkerchiefs or cushions, or be printed or otherwise impressed on boxes.

11. Be used as a costume or athletic uniform or part of one.

12. Be used as drapery of any sort whatsoever, never festooned, drawn back or up in folds, but always allowed to fall free. Bunting of blue, white and red-always arranged with the blue above, white in the middle, and red below-should be used for such purposes of decoration as covering a speaker's desk or draping the front of a platform.

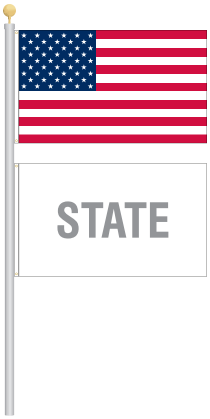
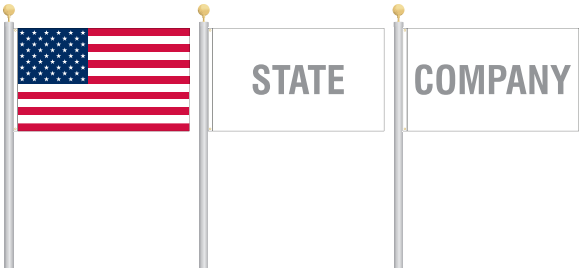
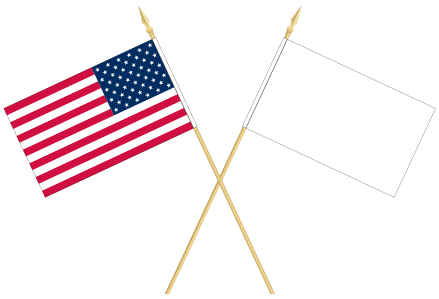
When the flag is displayed in any manner other than being flown from a staff, it should be displayed flat, whether indoors or out. If displayed either horizontally or vertically against a wall, the union should be uppermost and to the flag's own right; that is to the observer's left. When displayed in a window it should be suspended in the same way-that is, with the union to the left of the observer in the street.



When flags of states or cities, or pennants of societies, are flown on the same halyard with the flag of the United States, the latter should always be at the peak. When flown from adjacent staffs, the Stars and Stripes should be raised first and lowered last.

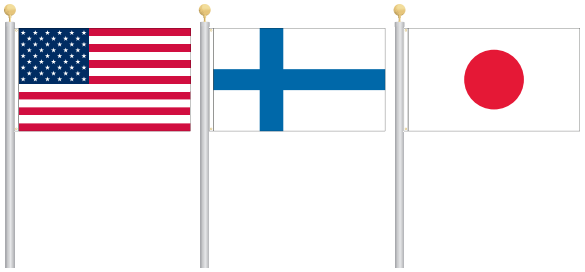


No other flag may be flown above the United States flag except at the United Nations Headquarters. The UN flag may be placed above flags of all member nations. No other flag can be placed to the United States flag's right.

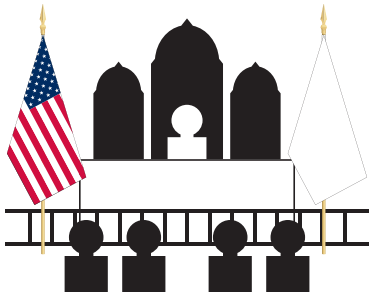


When displayed with another flag from crossed staffs, the flag of the United States should be on the right (the flag's own right), and its staff should be in front of the staff of the other flag.

When a number of flags are grouped and displayed from staffs, the flag of the United States should be in the center or at the highest point of the group.



When the flags of two or more nations are displayed together they should be flown from separate staffs of the same height, and the flags should be of approximately equal size. International usage forbids the display of the flag of one nation above that of another in time of peace.



When it is displayed on the pulpit or chancel in a church, the flag should be flown from a staff placed on the clergyman's right as he faces the congregation. All other flags on the pulpit or chancel should be on his left.

Did you know?...

June 14, 1777 - The Continental Congress passed the first Flag Act stating, “Resolved, That the flag of the United States be made of thirteen stripes, alternate red and white; that the union be thirteen stars, white in a blue field, representing a new Constellation." In 1949, President Harry S. Truman officially named June 14th Flag Day in commemoration of this event.

June 24, 1912 - For the first time, flags became standardized with specific proportions and the arrangement of the stars into six rows of eight each according to an Executive Order from President Taft.

August 21, 1959 - An Executive Order from President Eisenhower resulted in the stars being arranged in nine rows staggered horizontally and 11 rows staggered vertically.
