S. Serfoezo, M. Haas

ISBN:  
978-3-9522726-8-8 / 3-9522726-8-X

Price:  
SFR

Linking music with light and color, saturating spaces with sound or the like have been the visions preoccupying composers, musicians, scientists, artists and educators for centuries.

The artistic-scientific project „Color-Light-Music“ concentrates on the meeting point between synesthesia and color-light-music. The aim of the project is to awake and encourage the subjective synesthetic abilities of musicians and visual artists of different fields. By working in the border area of music, light and movement on the one hand and performing with the especially constructed color-light-piano © on the other hand, we are trying to reach this aim. The fusion of the parameters of sound, color, form and space should result in an integral concept of art which will lead the actor and the spectator to an emotional experience.
